Dear Crash Data Researchers/Users:

Thank you for choosing crash data from the National Highway Traffic Safety Administration (NHTSA) for your research or other use. The information contained in this motor vehicle crash report is collected, maintained and distributed in accordance with Public Law 89-564. In accordance with this Public Law, NHTSA is required not to release any case information until completion of quality control procedures. These procedures include a review of the case material to extract all names, licenses and registration numbers, non-coded interview material, non-research related researcher comments in the margins, non-factual data, and the production number portion of the vehicle identification number (VIN).

If you requested NHTSA to query its database files in order to identify a specific crash, then that query was made using non-personal descriptors you provided for use in our search. This motor vehicle crash may have been identified from a data search and matches the general, non-personal descriptors you provided, but we cannot confirm that this is the specific crash report you requested.

If you have any questions with regard to the above procedures, please contact the Field Operations Branch, Crash Investigation Division, National Center for Statistics and Analysis at 202-366-4820. Again, please be advised that we cannot confirm that this is the case that you have specifically requested nor can we certify the information to be correct.

AUTO SAFETY HOTLINE  
(800) 424-9393  
Wash. D.C. Area 366-0123

Case Vehicle (A): 1998 Chevrolet  
 Type: Cavalier, 4-door sedan  
 Driver: 29-year-old male  
 CDC: 11-FDEW-2

Vehicle (B): 1991 Ford  
 Type: Ranger, 4x2 extended cab pickup  
 Driver: 18-year-old male  
 CDC: 99-0000-0

## SITUATION

(Slide 1) Case vehicle (A) was stopped facing north in a private drive. The driver was preparing to make a left turn onto a straight section of a dry asphalt, seven-lane east-west roadway, (slide 2) with a speed limit of 80 kph (50 mph). Vehicle (B) was traveling in the inside eastbound lane of the seven-lane roadway. As the driver of vehicle (B) approached the private drive, case vehicle (A) pulled out of the driveway to make a left turn onto the east-west roadway. The driver of case vehicle (A) attempted to avoid a collision by braking, but was unable to keep the front of case vehicle (A) from striking the right fender of vehicle (B).

## GENERAL VEHICLE DAMAGE AND ESTIMATED CRASH SEVERITIES

(Slide 3) The maximum crush to vehicle (A) was 30 cm and occurred above the right-front bumper corner. The direct-damage length was 131 cm and involved the entire front bumper.

Using the WinSMASH accident-reconstruction program and (slides 4, 5, 6, 7, 8, 9, 10, 11, 12, 13) c-values for case vehicle (A), the following impact severity was calculated:

Vehicle	Variable	Calculated Velocity Change - kph (mph)		
		Total	Longitudinal	Latitudinal
Case Vehicle (A)	EBS	24 (15)	-21 (-13)	12 (7)

## DESCRIPTION OF DAMAGE TO CASE VEHICLE (A)

### Exterior

The front bumper, both headlight assemblies, the radiator, the grille, and both fenders were damaged. The hood was crushed, the hood latch was damaged and jammed shut, and both hood hinges were damaged, but did not separate. The rear edge of the hood was elevated, but it did not contact the windshield. All doors remained closed and operational.

**Interior**

(Slides 14, 15, 16, 17, 18) This vehicle was equipped with both steering-wheel and passenger frontal-impact airbags, which deployed during the frontal impact. No damage was noted to the airbag fabric, (slides 19, 20, 21, 22) or to the airbag module doors. (Slide 23) The steering-wheel rim was not deformed. The steering-wheel tilt adjustment mechanism was in a mid-to-up position. The seat was in the full-rear position and the seatback was slightly reclined. No intrusions were noted. (Slides 24, 25, 26, 27, 28) The right side of the windshield was cracked from contact by the cover of the deploying passenger frontal-impact airbag. (Slides 29, 30, 31, 32, 33) There was no evidence of driver contact with the A-pillar, windshield header/sunvisor, knee bolster, foot controls, or airbag module flaps.

**OCCUPANT INJURIES AND KINEMATICS**

The 6-ft, 2-in, 250-lb, 29-year-old male driver (slides 34, 35) was reportedly wearing the available three-point belt, and the steering-wheel airbag deployed. At the time of impact the driver reportedly had his hand at the ten and two o'clock positions on the steering wheel, and the steering wheel turned slightly to the left. On impact, he moved forward and to his left into the three-point belt and the airbag. He sustained an abrasion to the left side of his forehead, probably from contact by the airbag. He also sustained neck muscle strain, probably from impact forces.

The following table and attached drawing (slide 36) summarize the injuries sustained by the driver.

Restraints: 3-point belt worn; airbag deployed

**Stature:** 188 cm (6 ft, 2 in)

Mass: 114 kg (250 lb)

Injury Description	A.I.S.	Injury Source		
		Definite	Probable	Possible
